

On page 1 in the document you sent us, there is a dimension of 88mm (located in the bottom center of the page). To what does it refer?

Bolt diameters = 14.7mm (12.7mm bolt size + 2mm)

Are these dimensions correct?

The ribs are currently scripted at a constant width of 148mm. Preferably, we would like it to remain as such instead of varying the width. Is this possible or would dead weight be an issue?

This dimension seems quite large, is there any way to reduce it?
